

Compere-Glide Neck Guide System

Compere Systems Ltd is pleased to announce the new **Compere-Glide** Neck Guide System, a system that revolutionises PET air conveyor neck handling, providing the following advantages:-

- Minimal joints
- Fully clamped on straights and bends
- Once set up the guide rail can be replaced without the need to be reset
- Can be replaced by non-skilled personnel
- Less joints giving a smooth bottle flow
- Less material used, so replacement costs are vastly reduced
- The same part is used for all of the neck guide system
- As the guide rail is fully clamped small sections can be replaced as required
- Can be retro-fitted to existing air conveyor systems without the need for modifications to the host conveyor
- Potential power savings
